

# Variable Gain Low-Frequency Voltage Amplifier

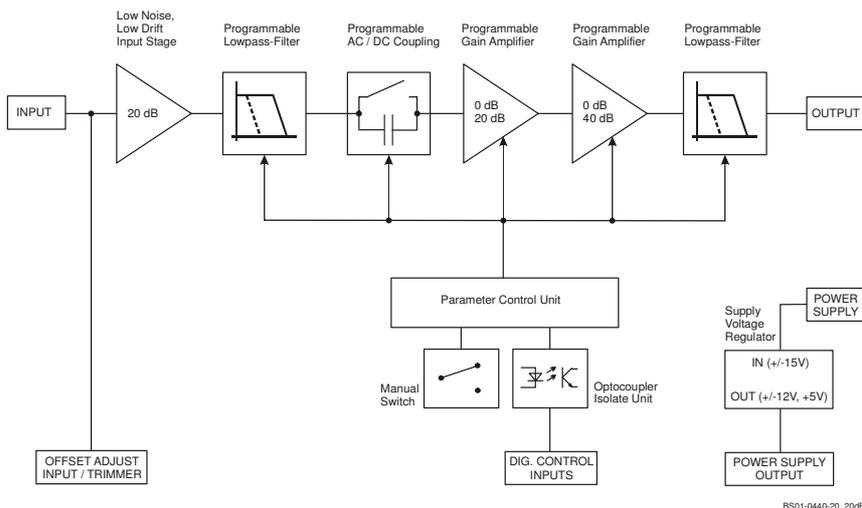

Features

- **Variable gain 20 to 80 dB, switchable in 20 dB steps**
- **Bipolar input stage, recommended for low impedance sources smaller than 1 kΩ**
- **Single ended and true differential input models**
- **Bandwidth DC - 100 kHz, switchable to 1 kHz**
- **0.7 μV/°C DC-drift**
- **120 dB CMRR**
- **2.4 nV/√Hz input noise**
- **Switchable AC/DC-coupling**
- **Local and remote control**

Applications

- **Universal laboratory amplifier**
- **Automated measurements**
- **Industrial sensors**
- **Detector preamplifier**
- **Integrated measurement systems**

BS01-0440-20\_20dB

## Variable Gain Low-Frequency Voltage Amplifier

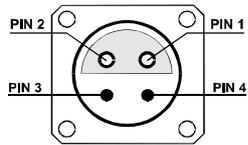

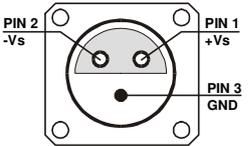

Specifications	Test conditions	$V_s = \pm 15\text{ V}$ , $T_A = 25\text{ }^\circ\text{C}$ , load impedance = $1\text{ M}\Omega$			
Gain	Gain values	20, 40, 60, 80 dB indicated by four LEDs			
	Gain accuracy	$\pm 0.1\%$ (between settings) $\pm 1\%$ (overall)			
	Gain flatness	$\pm 0.1\text{ dB}$			
Frequency Response	Lower cut-off frequency	DC, switchable to 1.5 Hz			
	Upper cut-off frequency	100 kHz, switchable to 1 kHz			
	Upper cut-off frequency rolloff	12 dB/oct.			
Time Response	Rise/fall time (10 % - 90 %)	3.5 $\mu\text{s}$ (@ BW = 100 kHz)			
		350 $\mu\text{s}$ (@ BW = 1 kHz)			
Input	Input impedance	1 M $\Omega$			
	Input capacitance	105 pF			
	Input voltage drift	0.7 $\mu\text{V}/^\circ\text{C}$			
	Equivalent input voltage noise	Gain setting	DLPVA-100-B-S	DLPVA-100-B-D	
		60, 80 dB	2.4 nV/ $\sqrt{\text{Hz}}$	3.6 nV/ $\sqrt{\text{Hz}}$	
		40 dB	6.4 nV/ $\sqrt{\text{Hz}}$	7.3 nV/ $\sqrt{\text{Hz}}$	
		20 dB	60 nV/ $\sqrt{\text{Hz}}$	60 nV/ $\sqrt{\text{Hz}}$	
	Equivalent input current noise	2 pA/ $\sqrt{\text{Hz}}$			
	1/f-noise corner	80 Hz			
	Input bias current	0.8 $\mu\text{A}$			
Input bias current drift	6 nA/ $^\circ\text{C}$				
Input offset voltage	$\pm 4\text{ mV}$ , adjustable by offset trimmer and external control voltage				
Output	True differential input, model "DLPVA-100-B-D" only:	Common mode voltage range			
		$\pm 8\text{ V}$			
		CMRR			
	Output impedance	120 dB (@ 100 Hz)			
		100 dB (@ 10 kHz)			
		80 dB (@ 60 kHz)			
Output	Output impedance	<100 $\Omega$ (terminate with > 10 k $\Omega$ load for best performance)			
	Output voltage range for linear amplification	$\pm 10\text{ V}$ (@ > 10 k $\Omega$ load)			
	Output current (max.)	$\pm 20\text{ mA}$			
	Output overload recovery time	0.5 ms (after 20 x overload)			

## Variable Gain Low-Frequency Voltage Amplifier

Specifications (continued)

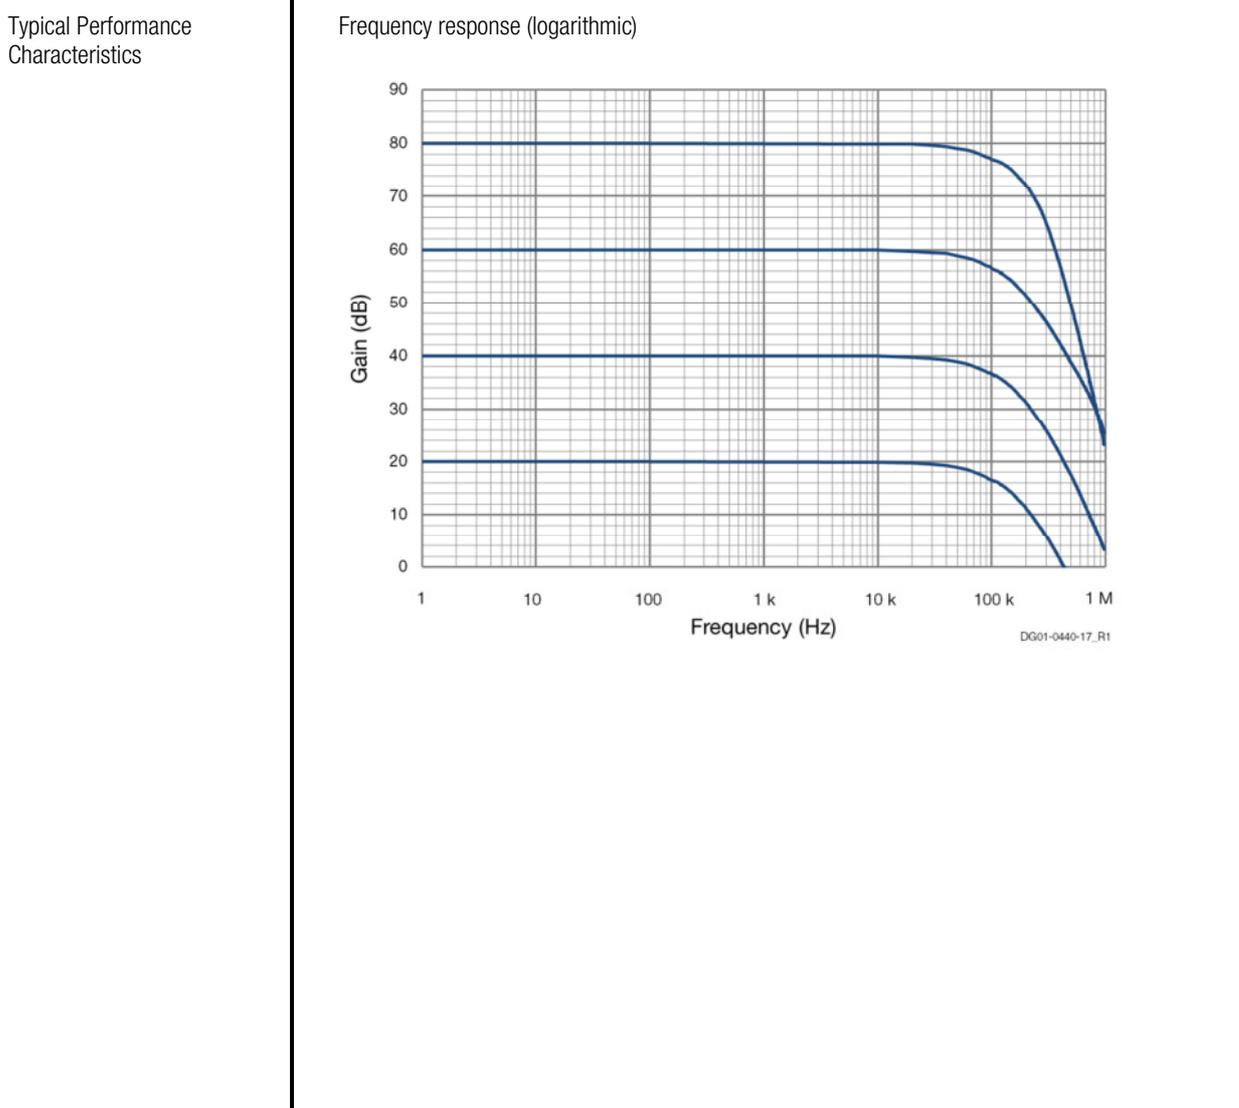

<p>Overload LED</p>	<p>The amplifier features a LED to indicate an overload condition. The Overload LED will turn on if the signal level within the signal path exceeds the linear operating range. In order to ensure the correct operation of the amplifier without signal distortions reduce the gain setting until the Overload LED turns off.</p> <p>The Overload LED may also turn on under the following operating conditions:</p> <ul style="list-style-type: none"> <li>- The amplifier is operated with open input or with a high source resistance, e. g. external AC coupling. In this case the bias current may cause a considerable input voltage. For proper operation please use a source resistance of less than 1 k<math>\Omega</math> for model "B-S" and less than 10 k<math>\Omega</math> for model "B-D", respectively, or switch to a lower gain setting.</li> <li>- When using a DLPVA-B-D with differential input stage the Overload LED may turn on if the common mode input voltage exceeds the common mode voltage range. This is likely to happen when the source is floating with respect to the amplifier ground. For proper operation make sure that the common mode voltage stays within the allowed common mode voltage range with respect to the amplifier ground. Provide an electrical connection between the source ground and the amplifier ground to ensure the inputs cannot drift outside the tolerable common mode range.</li> </ul>	
<p>Remote Offset Control</p>	<p>Offset control voltage range</p>	<p><math>\pm 10</math> V, corresponds to <math>\pm 4</math> mV input offset voltage</p>
	<p>Offset control input impedance</p>	<p>200 k<math>\Omega</math></p>
<p>Remote Digital Control</p>	<p>Control input voltage range</p>	<p>Low: <math>-0.8 \dots +0.8</math> V High: <math>+1.8 \dots +12</math> V, TTL / CMOS compatible</p>
	<p>Control input current</p>	<p>0 mA @ 0 V, 1.5 mA @ +5 V, 4.5 mA @ +12 V</p>
	<p>Overload output</p>	<p>Non active: +5 V, max. 1 mA, active: 0.8 V, max. <math>-10</math> mA</p>
<p>Power Supply</p>	<p>Supply voltage</p>	<p><math>\pm 15</math> V (<math>\pm 14.5</math> V to <math>\pm 16</math> V)</p>
	<p>Supply current</p>	<p><math>\pm 75</math> mA typ. (depends on operating conditions, recommended power supply capability min. <math>\pm 150</math> mA)</p>
<p>Case</p>	<p>Weight</p>	<p>0.32 kg (0.7 lbs)</p>
	<p>Material</p>	<p>AlMg4.5Mn, nickel-plated</p>
<p>Temperature Range</p>	<p>Storage temperature</p>	<p><math>-40</math> °C to <math>+85</math> °C</p>
	<p>Operating temperature</p>	<p>0 °C to <math>+60</math> °C</p>
<p>Absolute Maximum Ratings</p>	<p>Power supply voltage</p>	<p><math>\pm 21</math> V</p>
	<p>Control input voltage</p>	<p><math>+16</math> V / <math>-5</math> V</p>
	<p><i>Single ended input, model "DLPVA-100-B-S" only:</i></p>	
	<p>Signal input voltage</p>	<p><math>\pm 4.5</math> V</p>
	<p><i>True differential input, model "DLPVA-100-B-D" only:</i></p>	
	<p>Signal input</p>	
	<p>differential voltage <math>V_{DM}</math></p>	<p><math>\pm 3</math> V</p>
	<p>common mode voltage <math>V_{CM}</math></p>	<p><math>\pm 9</math> V</p>

## Variable Gain Low-Frequency Voltage Amplifier

Remote Control Operation	<p>General</p> <p>Remote control input bits are opto-isolated and connected by logical OR to local switch setting. For remote control set the corresponding local switch to "0 dB", "AC" and "1 kHz" and select the wanted setting via a bit-code at the corresponding digital inputs. Mixed operation, e.g. local gain setting and remote controlled bandwidth setting, is also possible.</p> <p>Gain setting</p> <table style="margin-left: 20px;"> <thead> <tr> <th>Gain</th> <th>Pin 11</th> <th>Pin 12</th> </tr> </thead> <tbody> <tr> <td>20 dB</td> <td>low</td> <td>low</td> </tr> <tr> <td>40 dB</td> <td>high</td> <td>low</td> </tr> <tr> <td>60 dB</td> <td>low</td> <td>high</td> </tr> <tr> <td>80 dB</td> <td>high</td> <td>high</td> </tr> </tbody> </table> <p>AC/DC setting</p> <table style="margin-left: 20px;"> <thead> <tr> <th>Coupling</th> <th>Pin 13</th> </tr> </thead> <tbody> <tr> <td>AC</td> <td>low</td> </tr> <tr> <td>DC</td> <td>high</td> </tr> </tbody> </table> <p>Bandwidth setting</p> <table style="margin-left: 20px;"> <thead> <tr> <th>Bandwidth</th> <th>Pin 14</th> </tr> </thead> <tbody> <tr> <td>1 kHz</td> <td>low</td> </tr> <tr> <td>100 kHz</td> <td>high</td> </tr> </tbody> </table>	Gain	Pin 11	Pin 12	20 dB	low	low	40 dB	high	low	60 dB	low	high	80 dB	high	high	Coupling	Pin 13	AC	low	DC	high	Bandwidth	Pin 14	1 kHz	low	100 kHz	high

# Variable Gain Low-Frequency Voltage Amplifier

<p>Dimensions</p>	<p>The drawing shows a top view and a side view of the amplifier. The top view includes dimensions for overall length (157 mm), input section (150 mm), and output section (137 mm). It also shows the positions of the IN, OVERLOAD, OFFSET, AC, DC, GAIN (+20 dB, +40 dB), 1 kHz, and 100 kHz controls. The output section shows the OUT and POWER connectors with dimensions of 44 mm and 51 mm. A diameter of 3.2 mm is indicated for a connector pin. The side view shows a height of 20 mm and a connector height of 15 mm. The model number DZ-DLPVA-100_R1 is noted at the bottom right of the drawing.</p> <p>Model no.: DLPVA-100-B-S (DLPVA-100-B-D differs regarding input connector)</p>
-------------------	---

<p>Ordering Information</p>	<p>Available models</p> <p>Model no.: DLPVA-100-B-S - Bipolar, single-ended input (BNC-connector input)</p> <p>Model no.: DLPVA-100-B-D - Bipolar, true differential input (Lemo®-connector input)</p>
